

Process Manager Enterprise Version vs. Community Edition

This table lists the key differences between the Community Edition of Process Manager and the Enterprise Edition. The most important feature of the Enterprise Version is the capability to build time based business workflow. In other words, you can model your businesses best practices from simple things such as send an email to a new lead to more complex business processes such as 'Customer for Life' campaigns. Process Manager Enterprise offers businesses the capability to run tasks now or in the future.

Feature	Enterprise Version	CE Edition
